2022

## CLIMATE MONITORING AND PREDICTION FOR SRI LANKA

### HIGHLIGHTS

#### Rainfall Prediction

- Moderately heavy ( $\geq 40$  mm) rainfall is predicted for the Sabaragamuwa, Uva, and Eastern provinces during 24<sup>th</sup> - 30<sup>th</sup> November.

#### Monitored Rainfalls

- During the last week, the average daily rainfall over Sri Lanka was 0.8 mm & hydro catchment areas received 0.8 mm on average and the highest average rainfall (1.6 mm) was received to the Eastern plains of the country.

#### Monitored Wind

- From 14<sup>th</sup> - 20<sup>th</sup> Nov, up to 6m/s of north-easterly winds were experienced at 850 mb level over the island.
- Wind Direction has changed from arriving from South-West to arriving from North East.

#### Monitored Sea & Land Temp

- Sea surface temperature around Sri Lanka was above normal to the Southern half of the country.
- Land surface temperature remained near normal.

### Monitoring Rainfall

#### Daily Estimates for Rainfall from 14<sup>th</sup> November – 21<sup>st</sup> November 2022

## Ocean State *(Text Courtesy IRI)*

### ***Pacific sea state: November 21, 2022***

Equatorial sea surface temperatures (SSTs) are below average across most of the Pacific Ocean late - November. The tropical Pacific atmosphere is consistent with La Niña. A large majority of the models indicate La Niña is favored to continue through during the Northern Hemisphere winter (December-February) 2022-23, with a transition to ENSO-neutral favored in February-April 2023 (57% chance).

### ***Indian Ocean State***

Sea surface temperature around Sri Lanka was above 0.5°C to the Southern half of the country in 16<sup>th</sup> November, 2022. Across the Indian Ocean, a classical negative Indian Ocean Dipole prevails as is typical during a La Niña.

## Predictions

### Rainfall

#### ***7-day prediction: IMD GFS models***

**From 24<sup>th</sup> November – 30<sup>th</sup> November:**

Total rainfall by Provinces:

Rainfall	Provinces
70 mm	Uva, Sabaragamuwa
40 mm	Eastern
20 mm	Southern, Central, North Western, North Central
≤ 10 mm	Northern, Western

### MJO based OLR predictions

#### ***For the next 15 days:***

MJO shall moderately suppress the rainfall during 23<sup>rd</sup> – 27<sup>th</sup> November, slightly suppress the rainfall during 28<sup>th</sup> November – 2<sup>nd</sup> December, and remain near normal during 3<sup>rd</sup> – 7<sup>th</sup> December for Sri Lanka.

## Interpretation

### Monitoring

***Rainfall:*** During the last two weeks, there had been very heavy rainfall over the following areas: Kegalle, Avissawella

Daily Average Rainfall in the Met stations for previous week of (15<sup>th</sup> November – 22<sup>nd</sup> November) = 0.8 mm

Rmax: 30.5 mm & Rmin: 0.0 mm.

Region	Average rainfall for the Last 8 days
Northern Plains	0.0 mm
Eastern	1.6 mm
Western	0.5 mm
Southern Plains	0.8 mm

The Hydro Catchment Areas recorded 0.8 mm of average rainfall for the last week

Rmax: 14.8 mm & Rmin: 0.0 mm.

**Wind:** North-easterly winds prevailed in the sea area and around the island last week.

**Temperatures:** The temperature anomalies were below normal for some parts of the North Central, North Eastern and Central provinces, driven by the warm SST's.

## Predictions

**Rainfall:** During the next week (24<sup>th</sup> – 30<sup>th</sup> November), moderately heavy ( $\geq 40$  mm) rainfall is predicted for the Uva, Sabaragamuwa, and Eastern provinces; and less rainfall is expected for the rest of the country.

**Temperatures:** The temperature will remain below normal for some parts of the Central and Uva provinces during 24<sup>th</sup> – 30<sup>th</sup> November.

**Teleconnections:** La Niña is favored to continue through during the Northern Hemisphere winter (December-February) 2022-23, with a transition to ENSO-neutral favored in February-April 2023 (57% chance).

MJO shall moderately suppress the rainfall during 23<sup>rd</sup> – 27<sup>th</sup> November, slightly suppress the rainfall during 28<sup>th</sup> November – 2<sup>nd</sup> December, and remain near normal during 3<sup>rd</sup> – 7<sup>th</sup> December for Sri Lanka.

**Seasonal Precipitation:** The precipitation forecast for the December-January-February 2023 season shows a higher tendency for near-normal precipitation to the country.

## Terminology for Rainfall Ranges

	Rainfall (During 24 hours of period)
Light Showers	Less than 12.5 mm
Light to Moderate	Between 12.5 mm and 25 mm
Moderate	Between 25 mm and 50 mm
Fairly Heavy	Between 50 mm and 100 mm
Heavy	Between 100 mm and 150 mm
Very Heavy	More than 150 mm

## Weekly Climate Bulletin for Sri Lanka

### Inside This Issue

#### 1. Monitoring

- Daily Rainfall Monitoring
- Weekly Rainfall Monitoring
- Monthly Rainfall Monitoring
- Dekadal (10 Day) Satellite Derived Rainfall Estimates
- Weekly Temperature Monitoring
- Weekly Wind Monitoring
- Weekly Average SST Anomalies

#### 2. Predictions

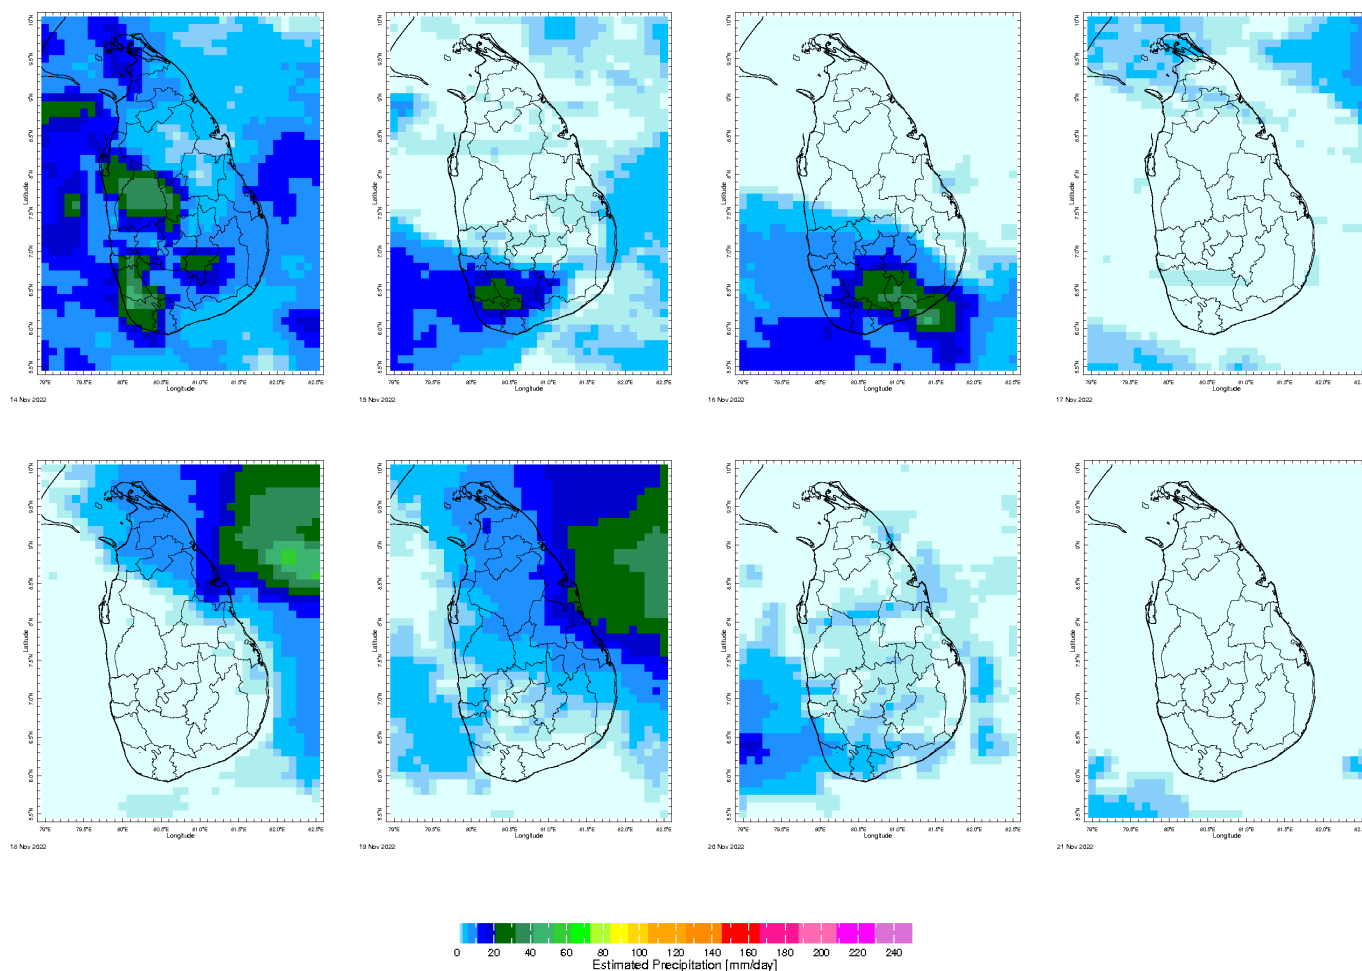

- NCEP GFS Ensemble 1-14 day Rainfall Predictions
- GFS (T574) Model Rainfall Forecast from RMSC New Delhi
- MJO Related OLR Forecast
- Weekly Temperature Forecast
- Weekly Wind Forecast
- Seasonal Predictions from IRI

### MONITORING

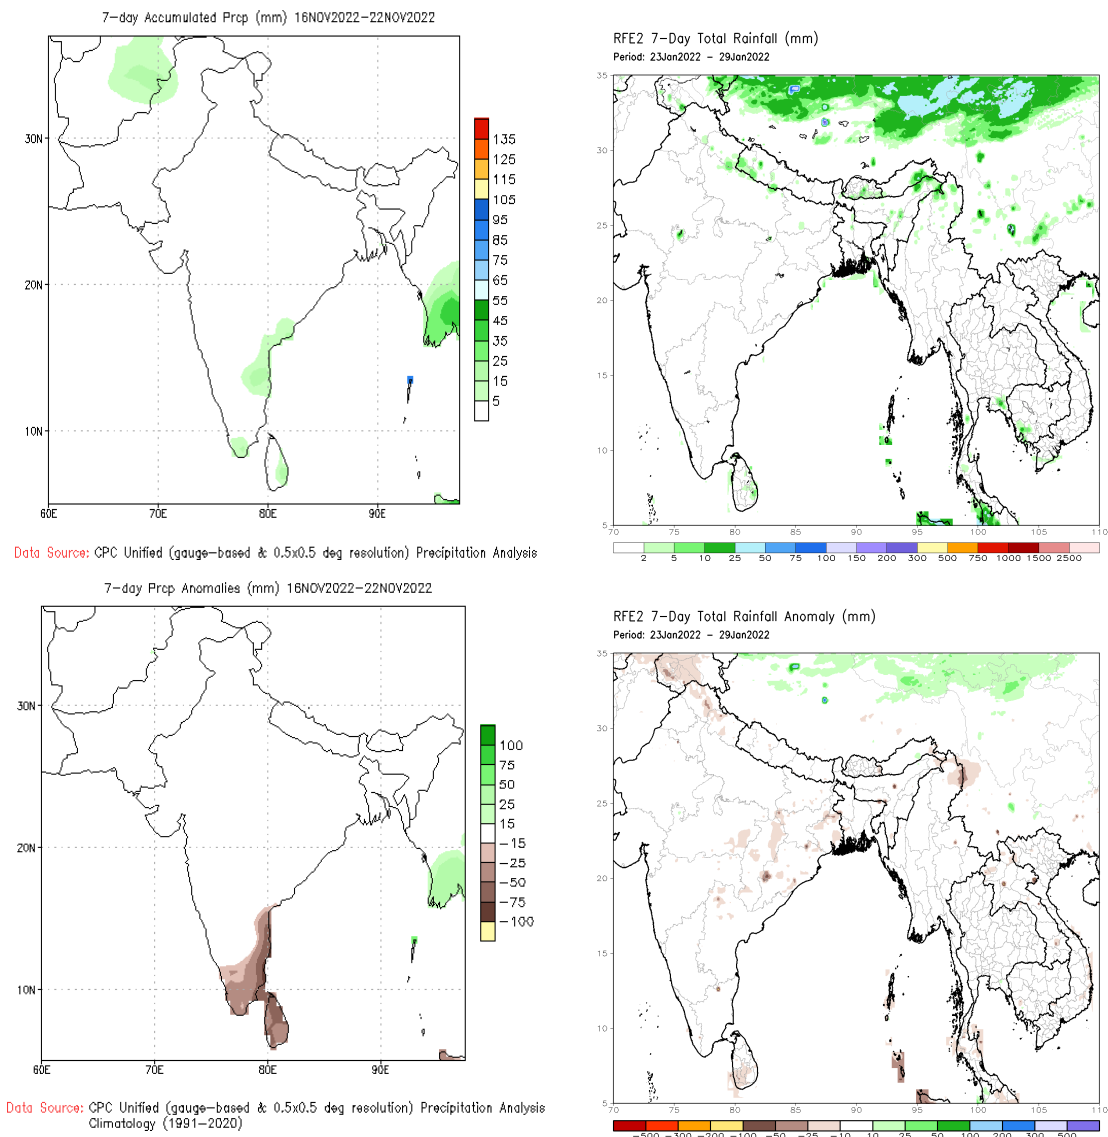

#### Daily Rainfall Monitoring

The following figures show the satellite observed rainfall in the last 7 days in Sri Lanka.

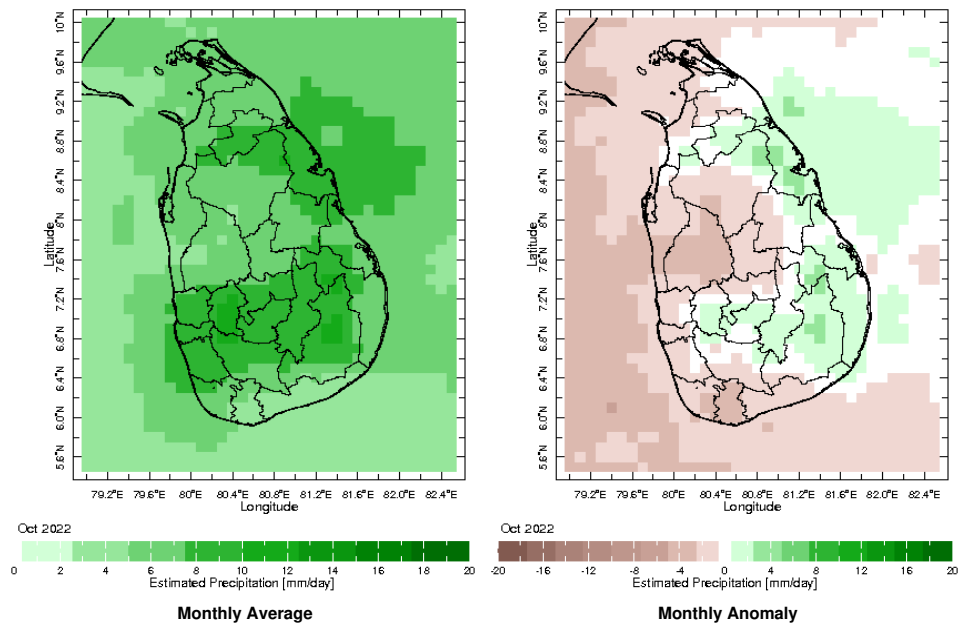

Weekly Rainfall Monitoring

The following figures show the total satellite observed rainfall in the last week in Sri Lanka. The figure in the left is the total 7-day rainfall from NOAA Climate Prediction Center (CPC) Unified Precipitation Analysis and the figure in the right is the total 7-day rainfall from CPC RFE 2.0 Satellite Rainfall Estimates. The bottom two figures are the respective anomalies.

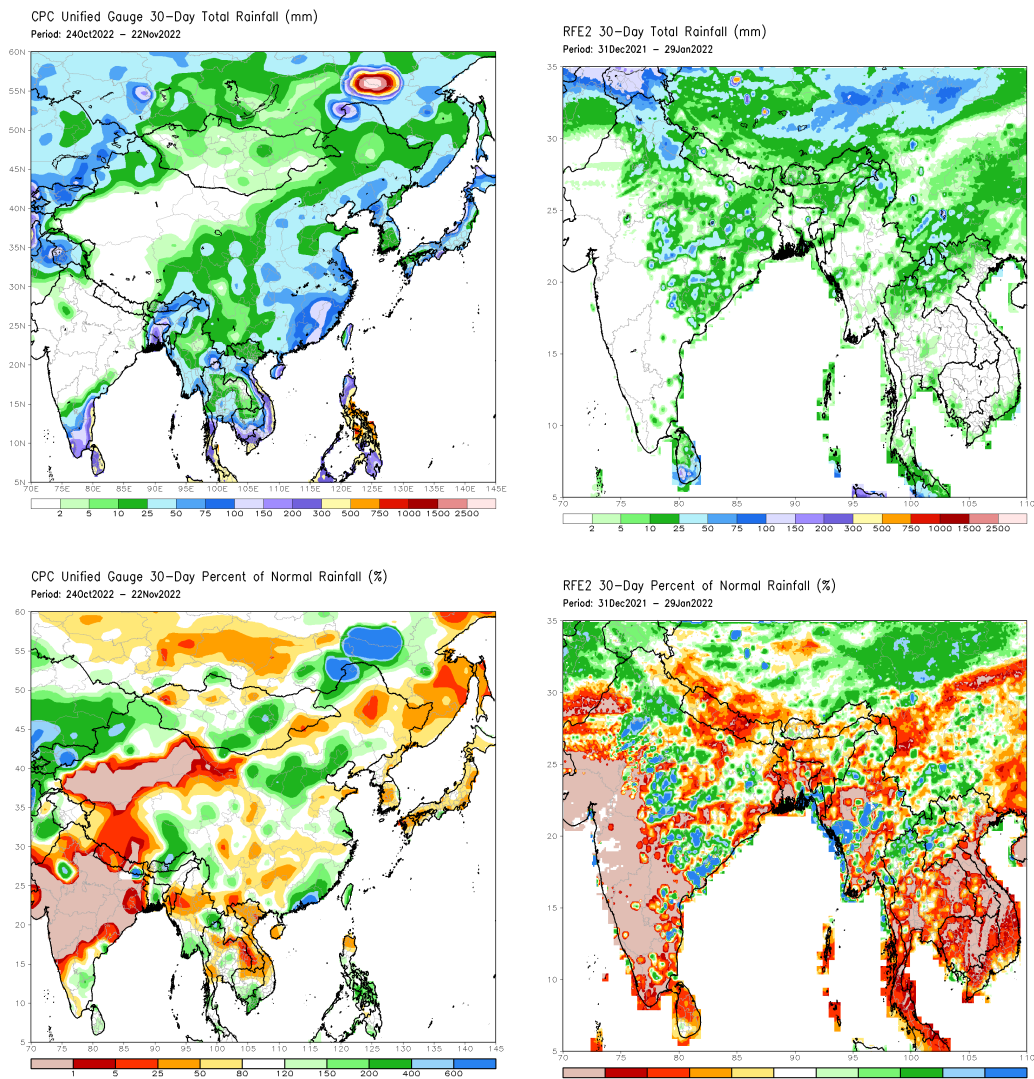

Monthly Rainfall Monitoring

The figure in the left shows the average observed rainfall in the previous month. The rainfall anomaly in the previous month is shown in the figure to the right. The brown color in the anomaly figure shows places which received less rainfall than the historical average while the green color shows places with above average rainfall. Darker shades show higher magnitudes in rainfall

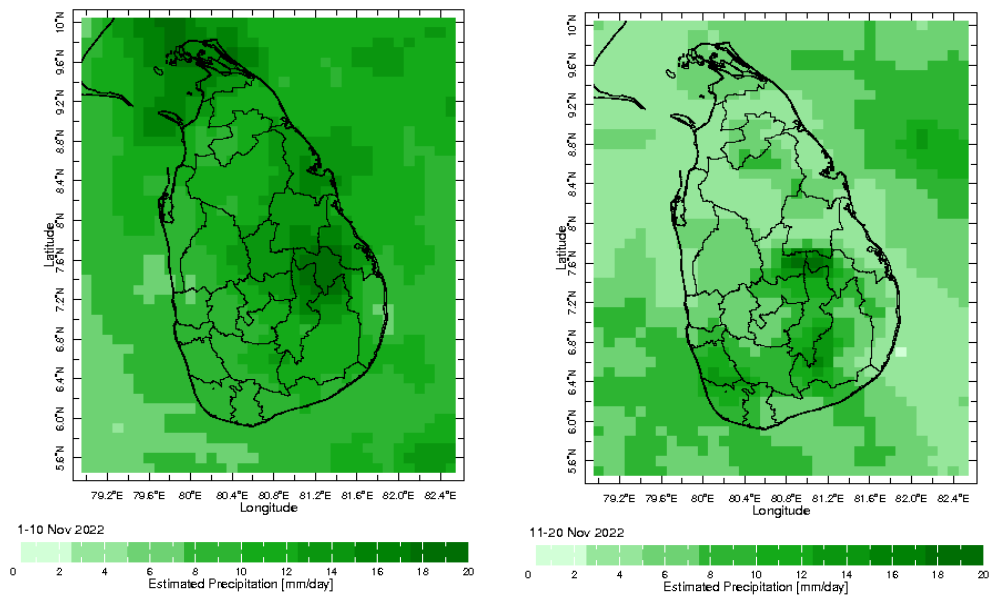

The figure in the top-left shows the total rainfall in the past 30 days from CPC Unified Precipitation Analysis while the figure in the top-right shows the total rainfall for the same period from RFE 2.0 Satellite Rainfall Estimates. The bottom two figures show the percentage of rainfall received in the past 30 days compared to normal rainfall in this period.

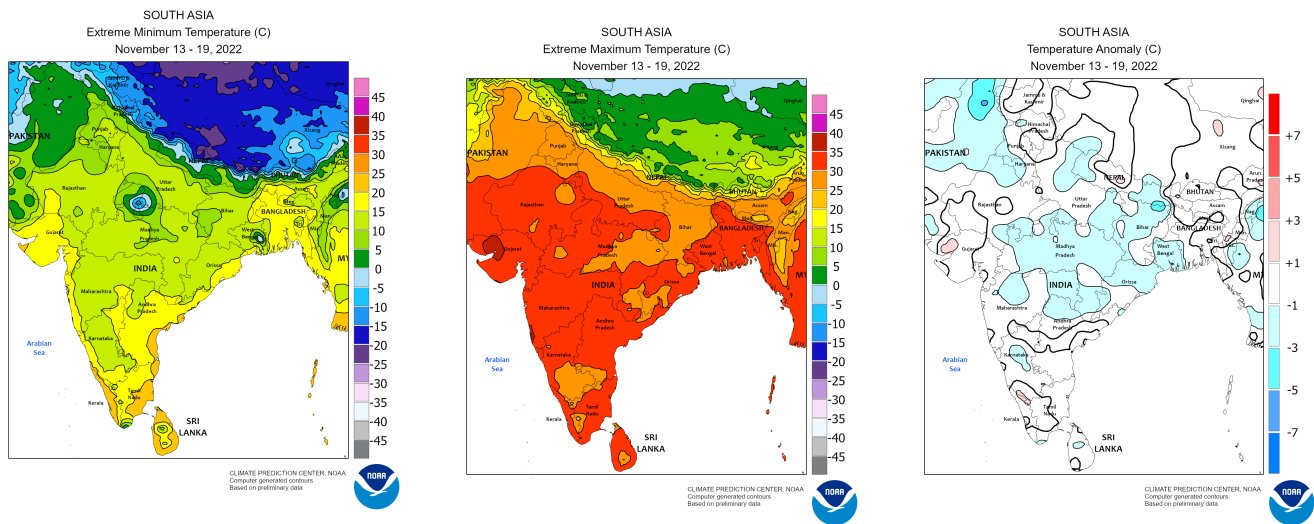

The following figure shows the observed accumulated rainfall (top) and daily observed rainfall (bottom) in Sri Lanka in the last 30 days.

Dekadal (10 Day) Satellite Derived Rainfall Estimates

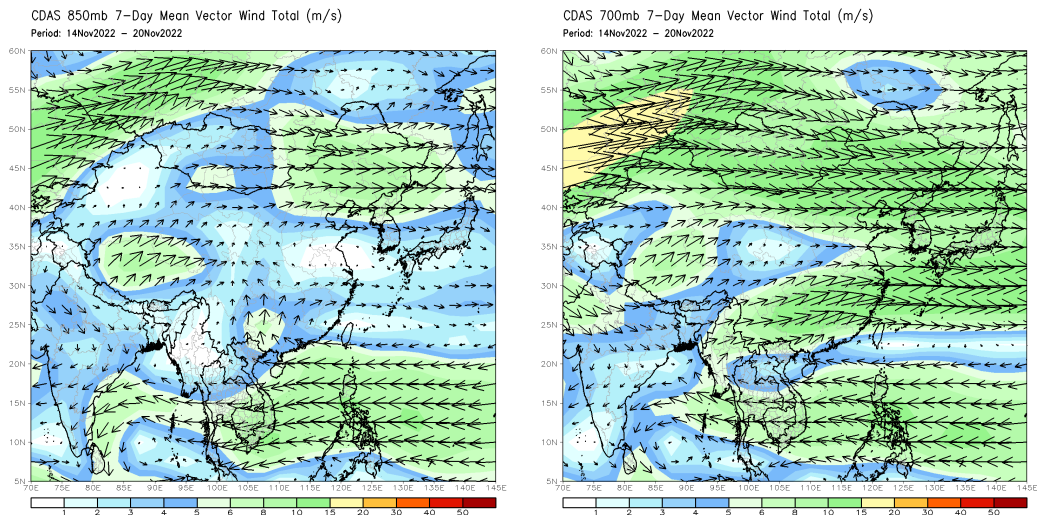

Weekly Temperature Monitoring

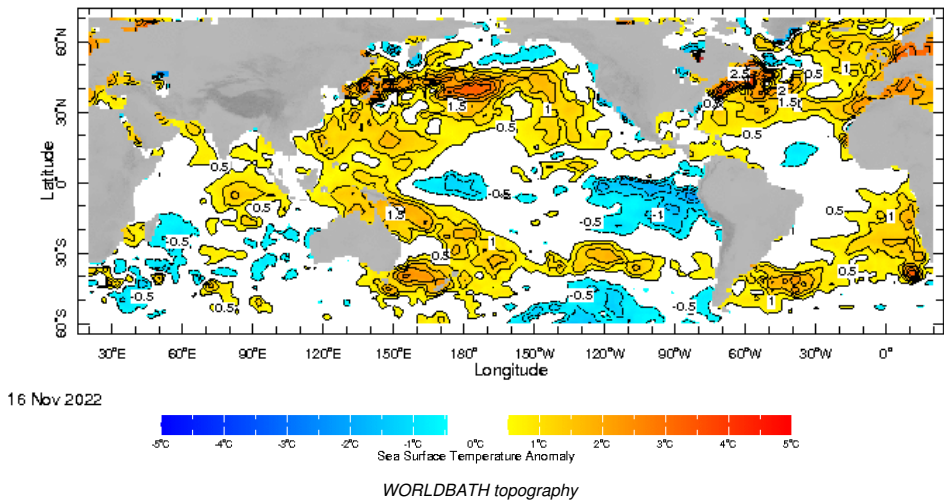

Weekly Wind Monitoring

The following figures show the mean vector wind total of the past 7 days near Sri Lanka at two levels. The figure on the left shows 850 mb (~1500 m) level and the figure on the right shows 700 mb (~3000 m) level.

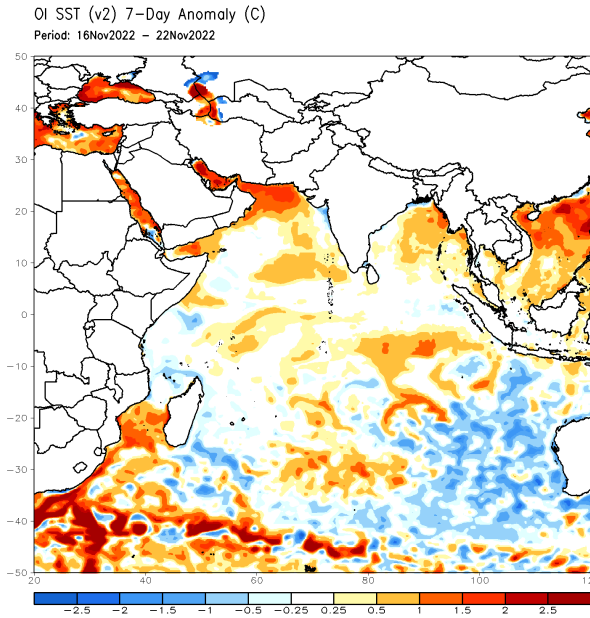

Weekly Average SST Anomalies

Weekly average Sea Surface Temperature (SST) anomaly in the world from NOAA NCEP

Optimum Interpolated Sea Surface Temperature Anomaly in the Indian Ocean from NOAA CPC

## NCEP GFS 1- 14 Day prediction

NCEP GFS Ensemble Forecast 1-7 Day Precipitation (mm)  
from: 23Nov2022  
23Nov2022-29Nov2022 Accumulation

Bias correction based on last 30-day forecast error

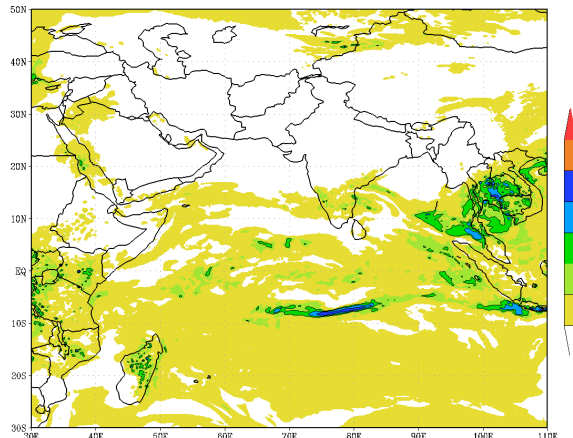

NCEP GFS Ensemble Forecast 8-14 Day Precipitation (mm)  
from: 23Nov2022  
30Nov2022-06Dec2022 Accumulation

Bias correction based on last 30-day forecast error

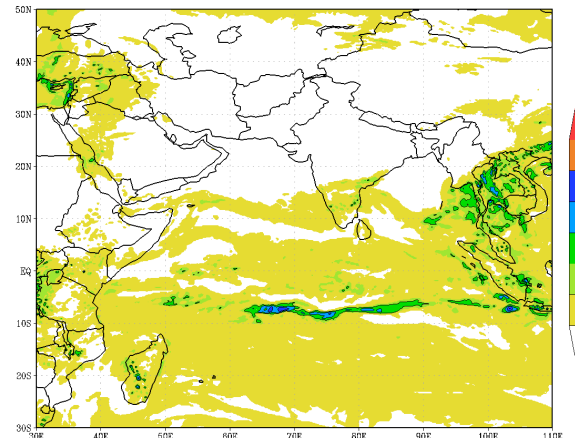

## IMD GFS (T574) Model Rainfall Forecast from RMSC New Delhi, India

IMD :GFS MODEL(12 Km) RAINFALL (mm) FORECAST (24 HR)  
based on 00 UTC of 23-11-2022 valid for 03 UTC of 24-11-2022

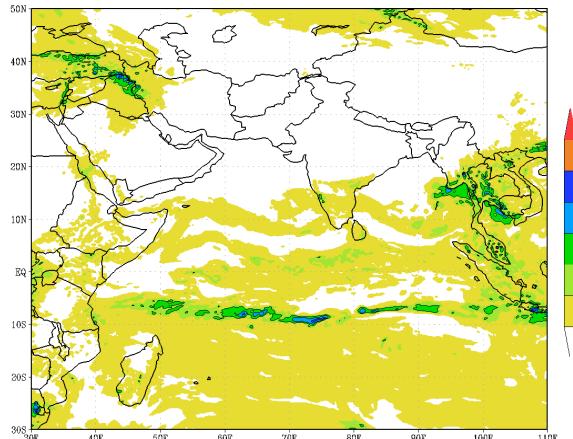

(Background does not depict political boundary)

IMD :GFS MODEL(12 Km) RAINFALL (mm) FORECAST (48 HR)  
based on 00 UTC of 23-11-2022 valid for 03 UTC of 25-11-2022

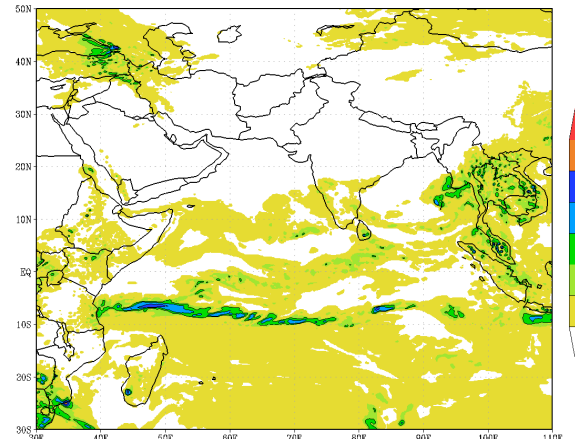

(Background does not depict political boundary)

IMD :GFS MODEL(12 Km) RAINFALL (mm) FORECAST (72 HR)  
based on 00 UTC of 23-11-2022 valid for 03 UTC of 26-11-2022

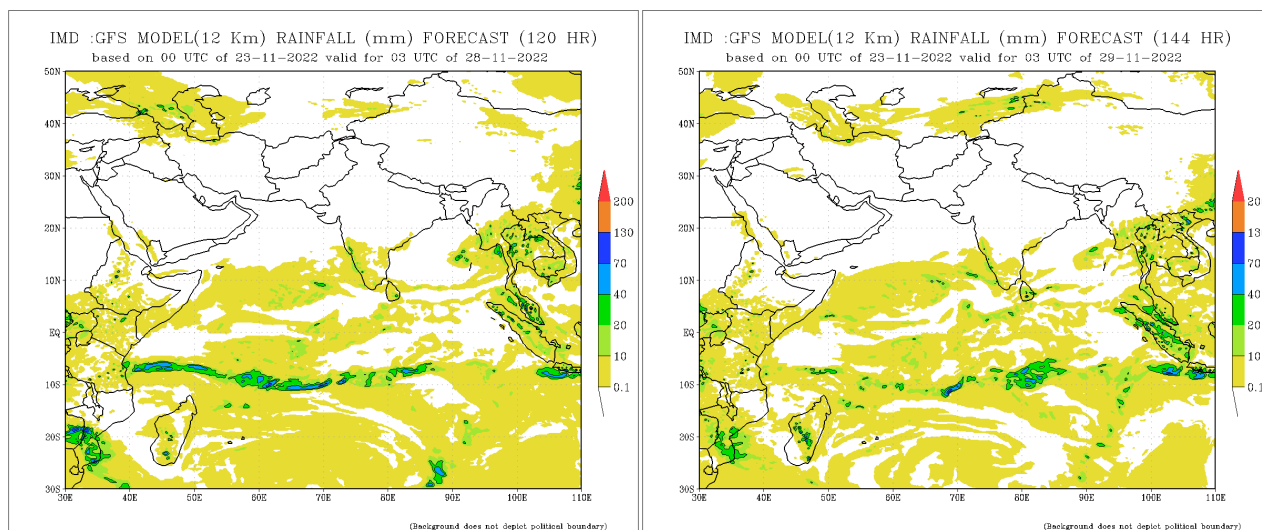

(Background does not depict political boundary)

IMD :GFS MODEL(12 Km) RAINFALL (mm) FORECAST (96 HR)  
based on 00 UTC of 23-11-2022 valid for 03 UTC of 27-11-2022

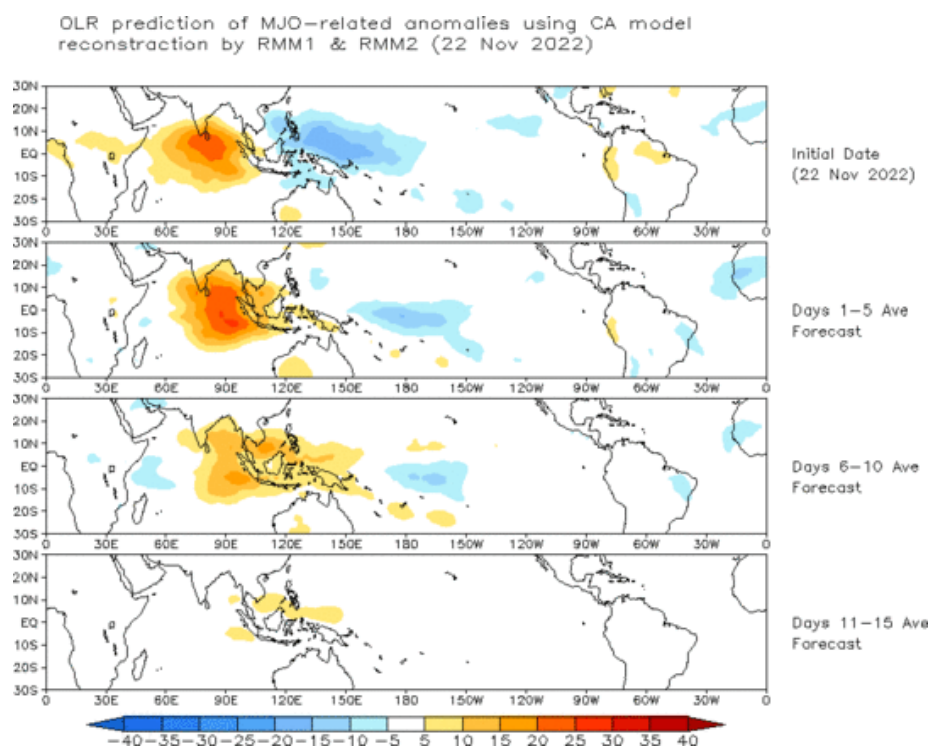

(Background does not depict political boundary)

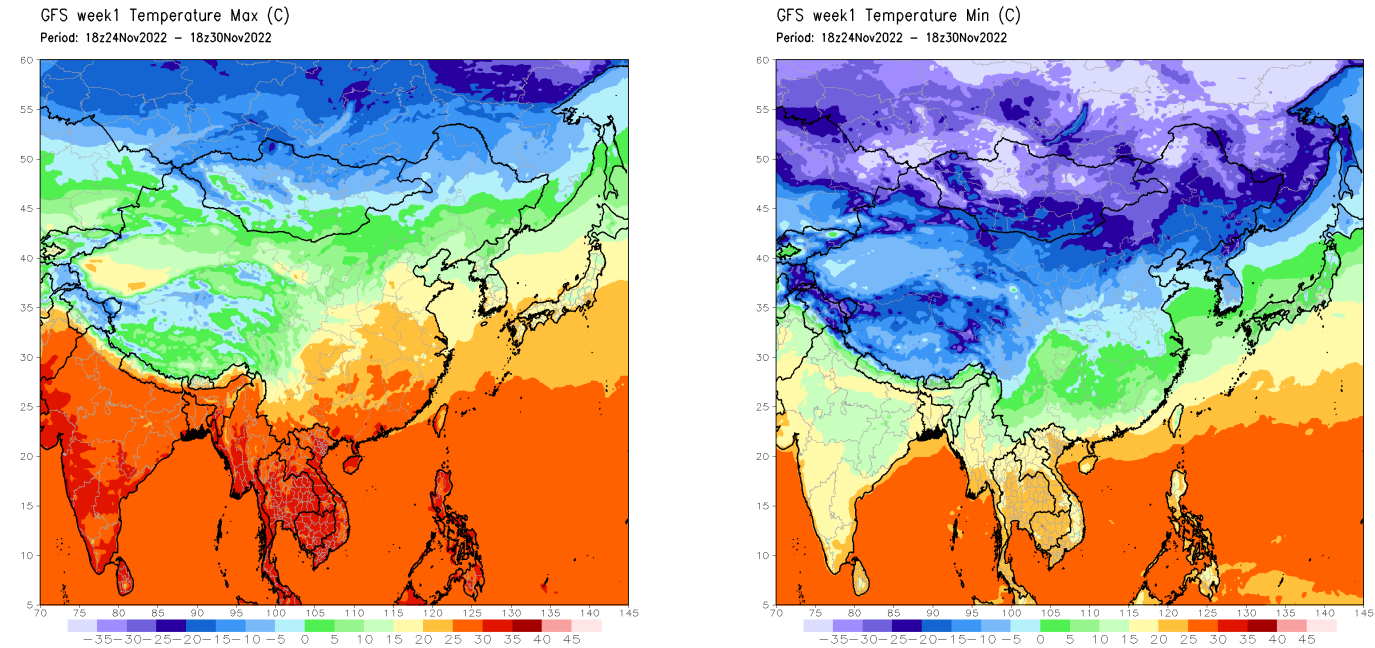

## Madden Julian Oscillation (MJO) related Outgoing Longwave Radiation (OLR) Forecast

The Outgoing Longwave Radiation (OLR) is a proxy for rainfall. This can be used to identify convective rain clouds based on the MJO phase. Violet and Blue shading indicates enhanced tropical weather and Orange shading indicates suppressed conditions. The following figure shows the forecasts of MJO associated anomalous OLR for the next 15 days from the Constructed Analogue (CA) model forecasts.

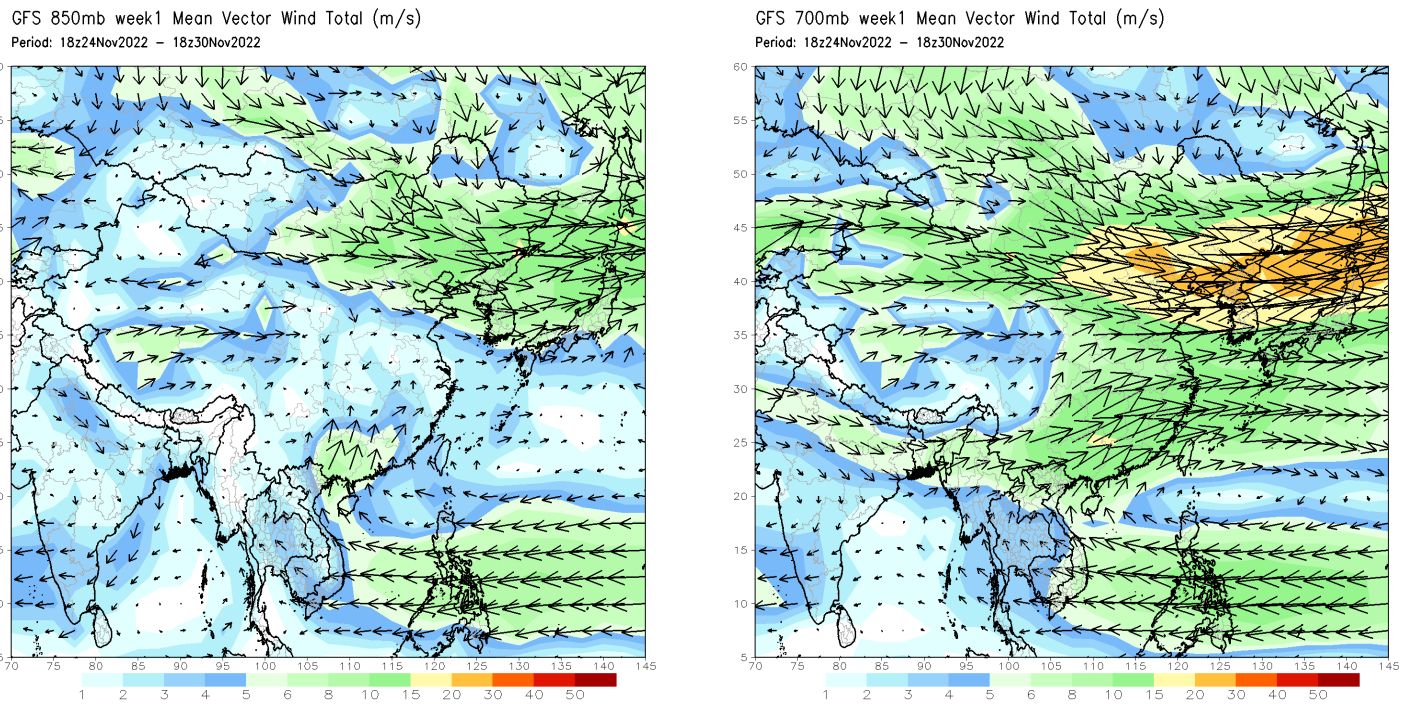

Weekly Temperature Forecast

Weekly Minimum and Maximum Temperature prediction from the GFS model (from NOAA CPC)

Weekly Wind Forecast

Weekly mean vector wind total prediction from the GFS model at 850 mb (left) and 700 mb (right) levels. (from NOAA CPC)

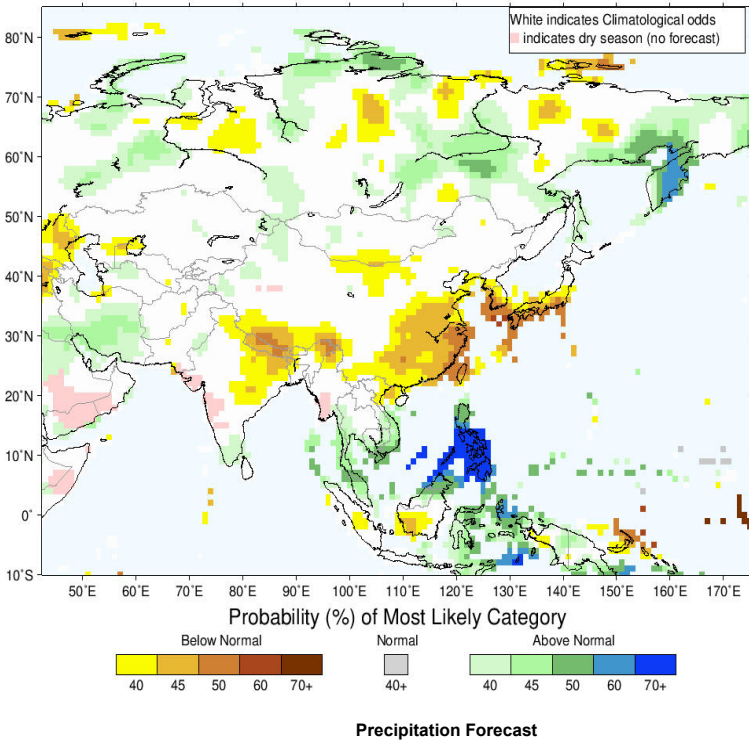

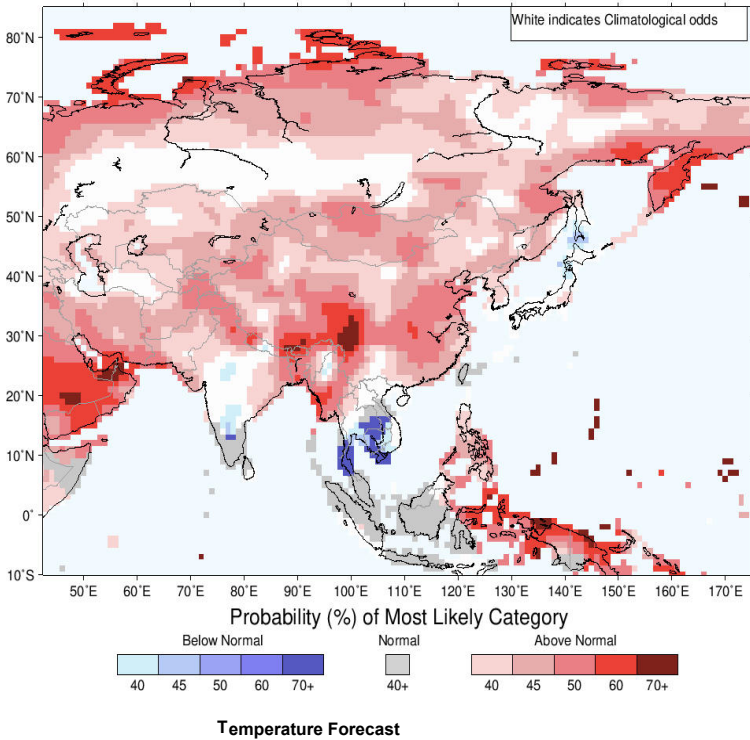

Seasonal Rainfall and Temperature Forecast

Following is the latest seasonal precipitation and temperature prediction for the next 3 months by the IRI. The color shading indicates the probability of the most dominant tercile -- that is, the tercile having the highest forecast probability. The color bar alongside the map defines these dominant tercile probability levels. The upper side of the color bar shows the colors used for increasingly strong probabilities when the dominant tercile is the above-normal tercile, while the lower side shows likewise for the below-normal tercile. The gray color indicates an enhanced probability for the near-normal tercile (nearly always limited to 40%).

IRI Multi-Model Probability Forecast for Precipitation for December-January-February 2023, Issued November 2022

IRI Multi-Model Probability Forecast for Temperature for December-January-February 2023, Issued November 2022

About us

FECT is a federation of 7 organizations registered in four countries which works in countries across the Indian Ocean Islands and its littoral. Over the last 20 years, we have had operations in Africa, South Asia, South-East Asia but now it is mostly in the Indian Ocean Islands.
