# 6 March, 2014 PACIFIC SEAS STATE

During January through February the observed ENSD conditions moved to the borderline of coolneutral and weak La Nina. However, most of the ENSD prediction models continue to indicate neutral ENSD into northern spring 2014. During late spring and summer a warming tendency is seen in both dynamical and statistical models.

(Text Courtesy IRI)

# INDIAN OCEAN STATE

The seas around Sri Lanka showed neutral sea surface temperature during 16<sup>th</sup>-22<sup>nd</sup> March 2014.

**MJO STATE** 

MJO is neutral.

# Highlights

### Monitoring and Predictions:

*Existing rainfall condition shall vary frequently (less than 4mm/day) till 5<sup>th</sup> April 2014. However, Eastern slopes and coasts are likely to observe increasing pattern of rainfall till 29<sup>th</sup> March and it shall decrease thereafter.* 

#### Summary Monitoring

**Weekly Monitoring:** During 18<sup>th</sup>-24<sup>th</sup> March 2014, Sri Lanka received comparatively more rainfall than the previous weeks. However, maximum rainfall observed on 20<sup>th</sup> for Kegalle district. On 19<sup>th</sup> entire country received rainfall of 5-10 mm/day. Rainfall started to decrease during end of the week.

**Monthly Monitoring:** Ratnapura district received the highest average rainfall during February 2014 (more than 5mm/day of average rainfall). However during February 2014, entire country experienced below normal rainfall and highest negative anomaly recorded at Batticaloa and Ampara district.

### Predictions

**14 day prediction:** During 28<sup>th</sup> March-1<sup>st</sup> April 2014, Entire country receive no rainfall, except for Galle shall receive 15-25 mm of rainfall/week. During 2<sup>nd</sup>-8<sup>th</sup> April, Colombo, Gampaha and Kalutara districts shall receive 55-65 mm of rainfall/week and shall spread towards entire country in a reducing pattern.

*IMD WRF &IRI Model Forecast:* For 28<sup>th</sup> of March, IMD WRF model predicts less than 8 mm of rainfall for Puttalam-Matara coastal districts and their nearby districts, Ampara and Batticaloa districts. For 29<sup>th</sup> of March, the model predicts same rainfall pattern as on 28<sup>th</sup>, except Ampara and Batticaloa shall not receive rainfall. IRI model predicts 5-25 mm/6 days of rainfall for entire country except for Jaffna, Killinochchi, Mullaitivu, Vavuniya and Mannar districts shall receive rainfall of less than 5 mm/6 days for the coming week (26<sup>th</sup>-31<sup>st</sup> March 2014).

**30** Days Prediction: Overall- Existing rainfall condition shall vary frequently (less than 4mm/day) till 5<sup>th</sup> April 2014. Western Slopes- The rainfall pattern persisting in the entire country shall be observed in this region, with less than 10 mm/day. Western Coast- Rainfall shall decrease gradually till 29<sup>th</sup> and thereafter it shall increase gradually till 5<sup>th</sup> April. Eastern Slopes- Existing rainfall shall increase gradually till 29<sup>th</sup> and thereafter it shall increase thereafter till 15<sup>th</sup>. Eastern Coast- Existing rainfall shall increase drastically till 29<sup>th</sup> and decrease thereafter. Northern- Rainfall is not predicted till 29<sup>th</sup> and thereafter it shall increase gradually. Southern Region- The rainfall pattern persisting in the entire country shall be observed in this region, with less than 5 mm/day.

**Seasonal Prediction:** As per IRI Multi Model Probability Forecast issued on March 2014; for April 2014 to June 2014, there is a 40-45% probability for temperature to be above normal in the country while the rainfall is to be climatological.

#### Inside this Issue

- 1. Monitoring
  - a. Daily Satellite Derived Rain fall Estimates
  - b. Monthly Rain fall Estimates
  - c. Decadal (10 Day) Satellite Derived Rainfall Estimates
  - d. Weekly Average SST Anomalies

2. Predictions

- a. NCEP GFS Ensemble 1-14 day predictions
- b. WRF model forecast Regional Meteorological Center, Chennai, Indian Meteorological Department)
- c. Weekly precipitation forecast (IRI)
- d. 1 month experimental predictions by Paul Roundy and L. Zubair
- e. Seasonal Predictions from IRI
