# **4 AUGUST** 2023

# CLIMATE MONITORING AND PREDICTION FOR SRI LANKA

# **HIGHLIGHTS**

Wind

Monitored & Predicted

# Rainfall Prediction

- the country during 3 9
- Fairly heavy rainfall (55mm) is predicted for the Southern and Sabaragamuwa provinces during 10 - 16 Aug.

# Monitored Rainfalls

Sri Lanka was 0.1 mm and hydro catchment areas received 0.2 mm.

- (1.5 km).
- •During 4 10 Aug, up to 10 m/s of northwest-westerly winds are expected at 850 mb (1.5 km).

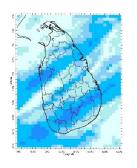

- Monitored Sea & Land Temp was 0.25 - 1.5°C above normal.
  - Average maximum land temperature ranged from 31 -33°C and minimum ranged from 24 -25°C with a drop in the hills.

# Ocean State (Text Courtesy IRI)\_

### Pacific sea state: July 31, 2023

El Nino Mode has set in now according to NOAA since 8<sup>th</sup> of June. Equatorial sea surface temperatures (SSTs) are above average across the central and eastern Pacific Ocean late-July. There is a greater than 90% chance that El Niño conditions will continue through the Northern Hemisphere winter.

### Indian Ocean State

Sea surface temperature around Sri Lanka was near normal to the country in 11<sup>th</sup> - 17<sup>th</sup> July, 2023. A positive Dipole Mode has set in across the Indian Ocean since 8<sup>th</sup> of June.

# **Predictions**

Rainfall \_\_\_\_\_

## 14 - day prediction: NOAA NCEP models

# From 3<sup>rd</sup> August – 9<sup>th</sup> August:

Total rainfall by Provinces:

Rainfall (mm)	Provinces
25	Sabaragamuwa
15	Southern, Western, Central
≤ 5	Northern, North Western, North Central, Eastern, Uva

# From 10<sup>th</sup> August – 16<sup>th</sup> August:

Total rainfall by Provinces:

Rainfall (mm)	Provinces
55	Southern, Sabaragamuwa
45	Western, Central, Uva
25	Eastern, North Western
≤ 15	Northern, North Central

# MJO based OLR predictions

## For the next 15 days:

MJO shall near neutral the rainfall during 3<sup>rd</sup> - 17<sup>th</sup> August for Sri Lanka.

# Interpretation

# Monitoring \_

**Rainfall:** During the last two weeks, there had been light showers over the following areas: Bandarawela, Galle

Daily Average Rainfall in the Met stations for previous week of (26<sup>th</sup> July - 2<sup>nd</sup> August) = 0.1 mm Maximum Daily Rainfall: 14.3 mm & Minimum Daily Rainfall: 0.0 mm.

Region	Average rainfall for last	Average temperature for last 8 days (°C)	
	8 days (mm)	Maximum	Minimum
Northern plains	0.0	34.2	26.3
Eastern hills	1.0	30.3	19.1
Eastern plains	0.1	35.7	25.5
Western hills	0.0	27.7	20.6
Western plains	0.1	30.8	26.8
Southern plains	0.0	34.6	25.8

Region	Average rainfall for last 8 days (mm)	Daily maximum rainfall for last 8 days (mm)	Daily minimum rainfall for last 8 days (mm)
Hydro catchment	0.2	4.0	0.0

Wind: North westerly winds prevailed in the sea area and around the island last week.

Temperatures: The temperature anomalies were above normal for some parts of the Uva, Sabaragamuwa, Southern, Central, and Eastern provinces of the country driven by the warm SST's.

### **Predictions**

Rainfall: During the next week (3<sup>rd</sup> August - 9<sup>th</sup> August), moderately rainfall (25 mm) is predicted for the Sabaragamuwa province and less rainfall is predicted for the rest of the country.

Temperatures: The temperature will remain above normal for some parts of the Eastern, Uva, Northern, North Central, Southern, and Central provinces during 4<sup>th</sup> August - 10<sup>th</sup> August.

**Teleconnections:** A positive Dipole Mode has set in across the Indian Ocean since 8<sup>th</sup> of June.

MJO shall near neutral the rainfall during 3<sup>rd</sup> - 17<sup>th</sup> August for Sri Lanka.

Seasonal Precipitation: The precipitation forecast for the August-September-October, 2023 season shows above normal precipitation for the country.

### **Terminology for Rainfall Ranges**

	Rainfall (During 24 hours of period)
Light Showers	Less than 12.5 mm
Light to Moderate	Between 12.5 mm and 25 mm
Moderate	Between 25 mm and 50 mm
Fairly Heavy	Between 50 mm and 100 mm
Heavy	Between 100 mm and 150 mm
Very Heavy	More than 150 mm

  b. GFS (T574) Model Rainfall Forecast from RMSC New Delhi
  c. MJO Related OLR Forecast
  d. Weekly Temperature Forecast
  e. Weekly Wind Forecast

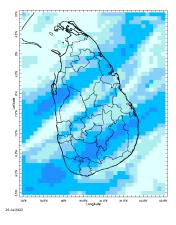

- Seasonal Predictions from IRI

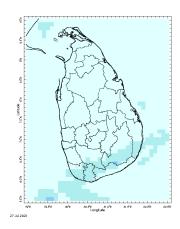

### **MONITORING**

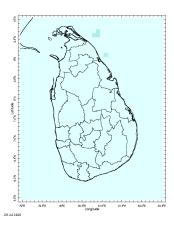

### **Daily Rainfall Monitoring**

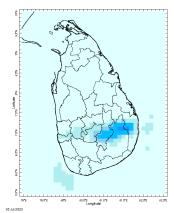

The following figures show the satellite observed rainfall in the last 7 days in Sri Lanka.

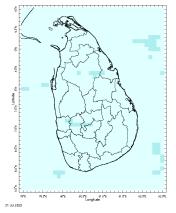

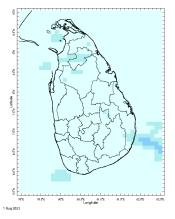

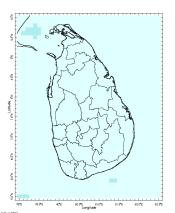

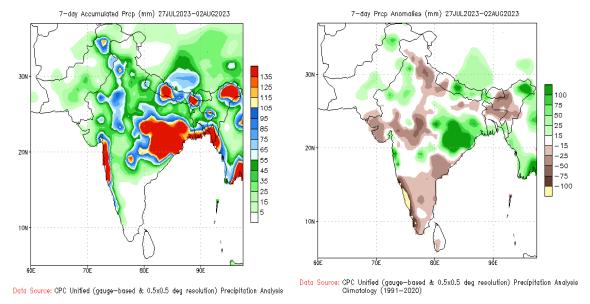

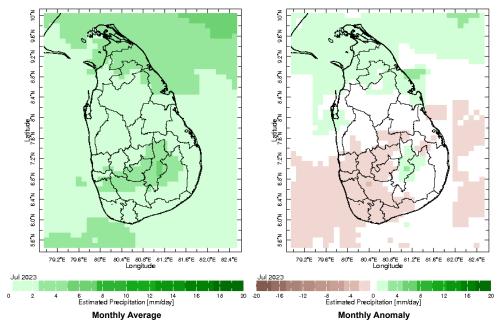

### Weekly Rainfall Monitoring

The following figures show the total satellite observed rainfall in the last week in Sri Lanka. The figure in the left is the total 7-day rainfall from NOAA Climate Prediction Center (CPC) Unified Precipitation Analysis and the figure in the right is the total 7-day rainfall from CPC RFE 2.0 Satellite Rainfall Estimates. The bottom two figures are the respective anomalies.

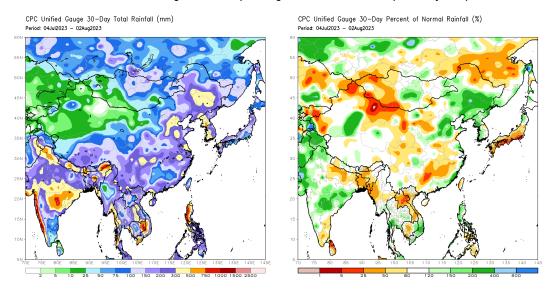

### **Monthly Rainfall Monitoring**

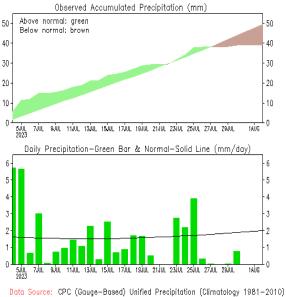

The figure in the left shows the average observed rainfall in the previous month. The rainfall anomaly in the previous month is shown in the figure to the right. The brown color in the anomaly figure shows places which received less rainfall than the historical average while the green color shows places with above average rainfall. Darker shades show higher magnitudes in rainfall

The figure in the top-left shows the total rainfall in the past 30 days from CPC Unified Precipitation Analysis while the figure in the top-right shows the total rainfall for the same period from RFE 2.0 Satellite Rainfall Estimates. The bottom two figures show the percentage of rainfall received in the past 30 days compared to normal rainfall in this period.

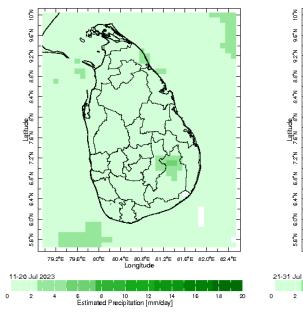

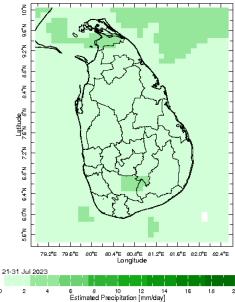

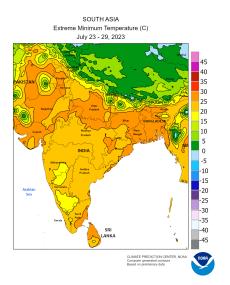

Data Source: CPC (Gauge-Based) Unified Precipitation (Climatology 1981-2010 (updated on DOZD2AUG2023)

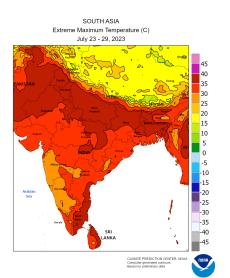

### Dekadal (10 Day) Satellite Derived Rainfall Estimates

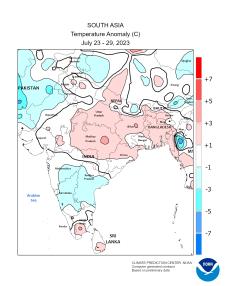

### **Weekly Temperature Monitoring**

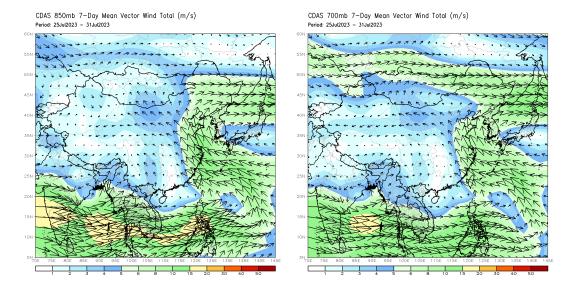

### **Weekly Wind Monitoring**

The following figures show the mean vector wind total of the past 7 days near Sri Lanka at two levels. The figure on the left shows 850 mb (~1500 m) level and the figure on the right shows 700 mb (~3000 m) level.

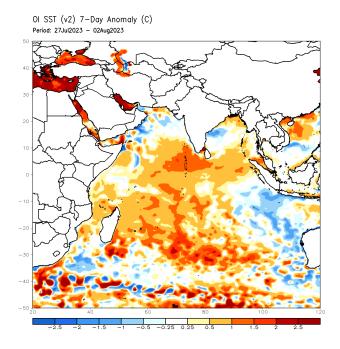

### **Weekly Average SST Anomalies**

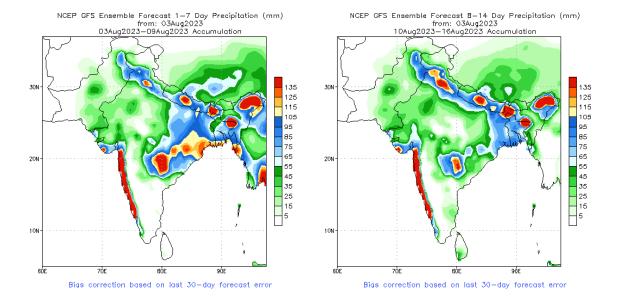

Weekly average Sea Surface Temperature (SST) anomaly in the world from NOAA NCEP

zlev 0.0 meters Time 11-17 Jul 2023

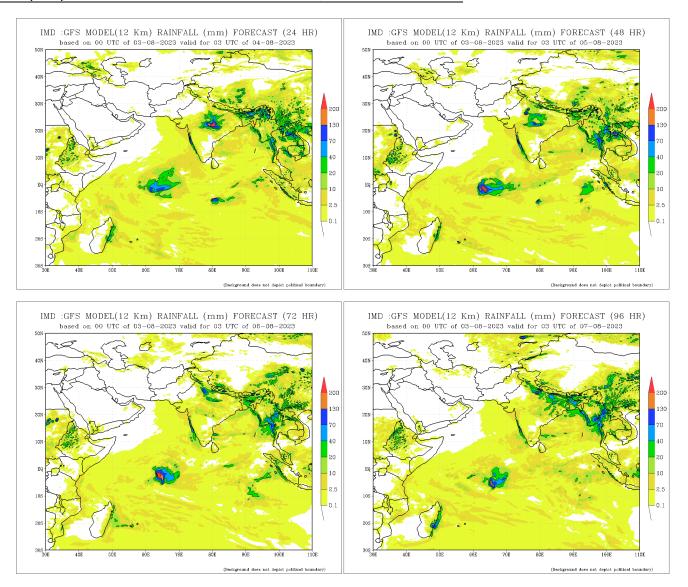

Optimum Interpolated Sea Surface Temperature Anomaly in the Indian Ocean from NOAA CPC

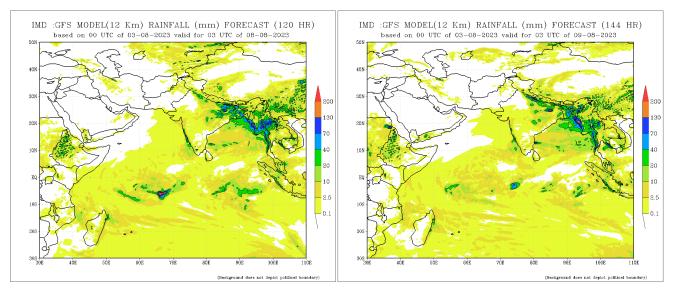

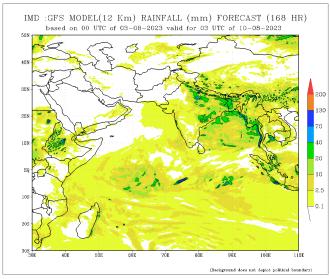

### NCEP GFS 1-14 Day prediction

### IMD GFS (T574) Model Rainfall Forecast from RMSC New Delhi, India

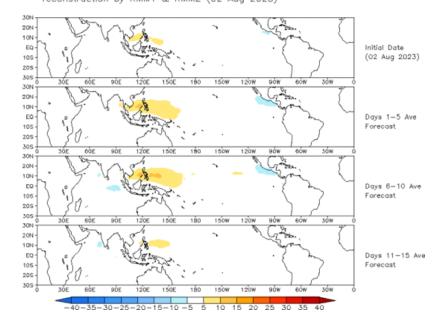

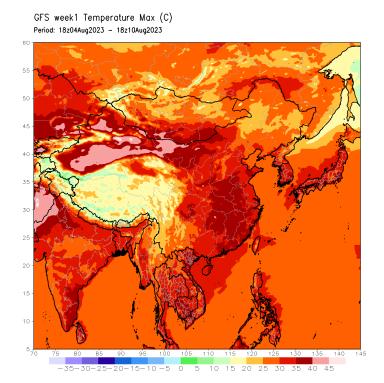

### Madden Julian Oscillation (MJO) related Outgoing Longwave Radiation (OLR) Forecast

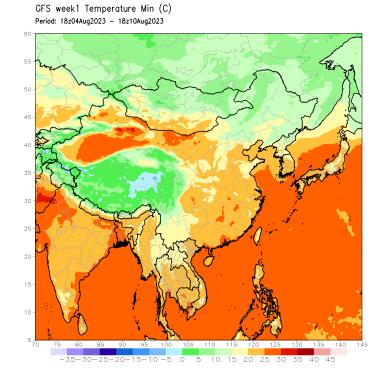

The Outgoing Longwave Radiation (OLR) is a proxy for rainfall. This can be used to identify convective rain clouds based on the MJO phase. Violet and Blue shading indicates enhanced tropical weather and Orange shading indicates suppressed conditions. The following figure shows the forecasts of MJO associated anomolous OLR for the next 15 days from the Constructed Analogue (CA) model forecasts.

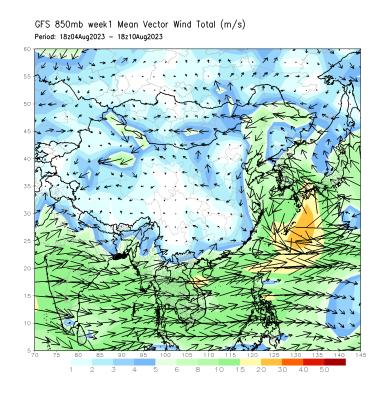

Weekly Minimum and Maximum Temperature prediction from the GFS model (from NOAA CPC)

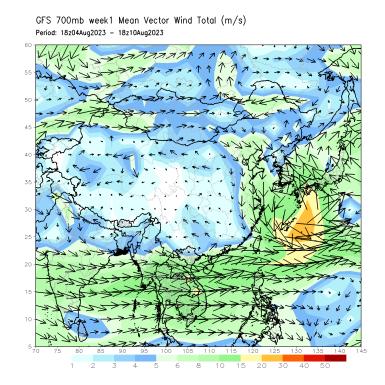

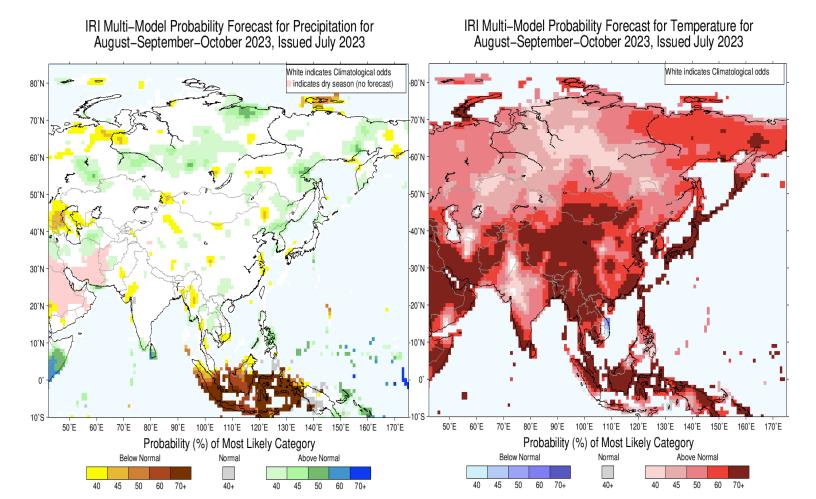

### **Weekly Wind Forecast**

Weekly mean vector wind total prediction from the GFS model at 850 mb (left) and 700 mb (right) levels. (from NOAA CPC)

Following is the latest seasonal precipitation and temperature prediction for the next 3 months by the IRI. The color shading indicates the probability of the most dominant tercile -- that is, the tercile having the highest forecast probability. The color bar alongside the map defines these dominant tercile probability levels. The upper side of the color bar shows the colors used for increasingly strong probabilities when the dominant tercile is the above-normal tercile, while the lower side shows likewise for the below-normal tercile. The gray color indicates an enhanced probability for the near-normal tercile (nearly always limited to 40%).

About us

FECT is a federation of 7 organi zations registered in four countries which works in countries across the Indian Ocean Islands and its littoral. Over the last 20 years, we have had operations in Africa, South Asia, South-East Asia but now it is mostly in the Indian Ocean Islands.
